

WINNING THE WORLD CUP!

Mental stamina, mental rehearsals and no injuries lead to PSYCHOLOGICAL ADVANTAGES that win games. Psychology is a huge part of every game plan and GAME TIME – STRATEGIES ON WINNING is the PSYCHOLOGICAL EDGE you need to win WORLD CUP 2006!

Poor performances in major tournaments can be traced to weak psychological – mental - motivation preparation. Without the psychological edge firmly placed in your strategy, you can be assured the team will not advance.

Give GAME TIME to each of your players and coaches and gain the PSYCHOLOGICAL EDGE needed in winning the World Cup. Use GAME TIME as part of your preparation and game strategy and win the World Cup. Ask each team member and coach if GAME TIME is ADDED MENTAL CONTROL. Their answer will be a resounding – YES!

Mental toughness minimizes injuries and sustains a player's performance level – mental rehearsals prove that each player is not competing with the competition, but playing out what he visualizes. Time – Space Dimensions are rehearsed through simple breathing techniques that maximizes situations and results – on and off the field. Distractions are neutralized and concentration levels are increased daily!

GAME TIME is attached – Use it and Win! Give it to your players and coaches – implement the PSYCHOLOGICAL EDGE you need to win WORLD CUP 2006!

In closing, I am also available for consultations. GAME TIME'S MENTAL GAME PLAN will increase your team's performance level and assist you in being highly successful.

Without a psychological edge you will be just another team in the tournament!
